

ADJUSTABLE Magnetic Clicker

The Adjustable Clicker is our newest Magnetic Clicker. Our magnetic clickers have many advantages over the standard metal blade type clicker including the light tension placed on the side of the arrow at full draw. This clicker also has a very solid and audible click. Added to these features is the ability to easily adjust for arrow length.

INSTALLATION:

The Adjustable Clicker is designed to be installed under the sight block on your bow. Simply remove the sight block and place the clicker plate under it and reinstall the sight block. You will have to move your sight out slightly to compensate for the thickness of the clicker plate. The clicker wire is shipped in the up position and will need to be moved into the proper position and adjusted so that the wire lays flat against the clicker stop or the bow window. One set screw allows you to move the clicker wire for arrow length adjustment and for adjusting the wire against the stop. For best results make sure the magnets are touching when the wire is against the stop in the down position. The clicker wire can also be bent to accommodate the differences in bow handles and clicker stops.

After installation you may want to trim the length of the clicker wire, to fit your set up. It is best to mark the clicker wire and remove it from the plate before trimming.
